

NYLON CABLE TIE USE TIPS

The ties can be used in a variety of ways. Primarily, we enclose them for use as these photos show. Bend the small ties at a sharp angle, 1/3 distance from the tapered tip, so it can be inserted through a vent hole or slot, then pulled back out so the tip exits a neighboring hole. Grasp the tapered tip and pull enough through to make a loop by, securing the tip through the locking end by only a click or two. The longer tie can then be formed into a large loop, by passing it through the smaller loop. This larger loop can then cradle the light, allowing it to be easily removed for servicing or rotated for adjusting the illumination on the wall behind the TV.
